

Position available

Research Technician – Celentyx Ltd

Celentyx Ltd is a successful pharmaceutical research and development company (based Birmingham UK), undertaking high-level immune focussed *in vitro* research using primary human cells and tissues.

We are currently looking for a hard-working and highly-motivated individual to join our *in vitro* biology team, which runs a wide range of cell biology and immunology assays screening novel immune modulating drugs using techniques such as multi-colour flow cytometry, high-throughput confocal microscopy, multiplex cytokine assays, 3D-culture and RNAseq. The successful applicant will be an integral part of a dynamic and flexible team that delivers a variety of high-level and often bespoke research to strict timescales.

Prospective candidates should hold a degree in immunology or another relevant subject. Demonstrated experience and competence in mammalian cell culture is desirable but not essential. Experience in immunology and cell biology, including flow cytometry, and functional assays would be an advantage. In addition, excellent organisational skills and the ability to work as part of a team as well as independently are required. All Celentyx personnel have a responsibility to understand and follow the company's quality management system, maintain accurate records and work to an exceptionally high standard.

A salary commensurate with qualifications and experience along with an attractive bonus and share option scheme will be offered. If appropriate, the successful candidate will have the opportunity to register for a PhD.

Interested parties should email a current CV and cover letter to opportunities@celentyx.com.
